Bachelor of Science in Economics

The Bachelor of Science in Economics (Weekend Programme) is a flexible, four-year undergraduate degree tailored for working professionals, mature students, and individuals seeking to advance their knowledge of economics without disrupting their weekday commitments. The programme offers a rigorous education in economic theory, quantitative techniques, and applied analysis, delivered through weekend sessions.

Students are trained in key areas such as microeconomics, macroeconomics, econometrics, mathematical economics, development economics, and public finance. The programme emphasizes practical problem-solving, critical thinking, and data-driven decision-making, with relevance to both the public and private sectors. Graduates are equipped for careers in economic research, policy analysis, banking, finance, consulting, and other fields that demand strong analytical and economic reasoning skills. The programme also provides a solid foundation for postgraduate studies in economics and related disciplines.
